

José Flórez

Software Engineer | Backend-focused C# / .NET | PostgreSQL | React / TypeScript | Production APIs and Web Applications

Bucaramanga, Santander, Colombia • jose.david.florez.navarrete@gmail.com • 301 5386058 • josedavidflorez • JoseDFlorez

Experience

Planeta IP Comunicaciones SAS ESP, Software Engineer (.NET) – Bucaramanga, Santander, Colombia Oct 2025 – Oct 2026

Built and supported production software across emergency-services, healthcare SaaS, and referral-tracking products.

- Delivered production features end to end across database design and migrations, ASP.NET Core APIs, integrations, authentication and authorization, reporting, deployment readiness, and production support
- Built and evolved versioned REST APIs with centralized error handling, standardized responses, rate limiting, JWT authentication, refresh-token rotation, RBAC, and hierarchical authorization
- Refactored PostgreSQL-driven business logic into maintainable Clean Architecture layers using Dapper, FluentValidation, parameterized SQL, CTEs, pagination, batched queries, and Unit of Work transactions
- Led analysis of a PostgreSQL 17 healthcare SaaS database with 846 functions, 219 tables, and 39M rows; created Node.js/SQL dependency tooling and safely removed 232 functions, 25 tables, 11 views/materialized views, and 31 foreign keys, freeing 491 MB while preserving live behavior
- Improved application security by removing 78 client-supplied user ID fields, enforcing server-side identity, adding file-signature validation, and strengthening session handling across APIs
- Built Dapper-based reporting, PDF/Excel exports, Dockerized font configuration, and Gemini-powered AI features with caching and audit trails; also used Claude Code and Codex for architecture planning, code review, and implementation support

Education

BS Saint Leo University, BS in Computer Systems Engineering – Tampa, FL Mar 2023 – May 2026

- GPA: 3.75/4.00, Dean's Honor List

Boot-camp Campuslands, Bootcamp in Fullstack Development – Floridablanca, Colombia Sept 2024 – June 2025

- Intensive full-stack development program focused on C#, ASP.NET, PostgreSQL, and software architecture

Skills

Languages: C#, TypeScript, JavaScript, Python, SQL, HTML/CSS, Kotlin

Backend & APIs: .NET 8, ASP.NET Core Web API, REST APIs, Dapper, Entity Framework Core, FluentValidation, Swagger/OpenAPI, Serilog

Frontend & Mobile: React, React Router, Tailwind CSS, Zod, i18next, Jetpack Compose

Architecture & Security: Clean Architecture, SOLID, Unit of Work, JWT, refresh-token rotation, RBAC, hierarchical authorization

Databases: PostgreSQL 17, MySQL, SQLite, schema design, migrations, stored functions, CTEs, query optimization

Tools & Infrastructure: Docker, Git, GitHub, Jira, Vercel, Node.js, Gemini API, Claude Code, Codex

Languages

Spanish: Native

English: C1 (Advanced)

Projects

Portfolio React Jan 2026

Fullstack Developer (React 19 / React Router SSR / TypeScript / Tailwind CSS / Vercel)

- Built an SSR, bilingual portfolio with React 19, React Router 7, TypeScript, Tailwind CSS, feature-based modules, typed project data, and i18next localized routes/metadata
- Implemented production-ready contact and deployment flows with Zod/React Hook Form validation, honeypot/rate limiting, Resend email, CSP nonce headers, /api/health, Vercel support, Vitest, and Playwright

Task List Web App

Mar 2023

Fullstack Developer (Python / Flask / SQLite)

- Developed a task management web application using Python and Flask with SQLite for persistent storage, deployed on PythonAnywhere

SpaceX Explorer App

Jan 2025

Mobile Developer (Kotlin / Jetpack Compose / API Integration)

- Developed a native Android app to explore SpaceX data via the public API (v4) using Clean Architecture, Hilt, and Kotlin Coroutines
